

Servicing Sustainable Energy

PROVEN SOLUTIONS FOR RELIABLE GENERATION

Versalence provides a variety of services for government and privately owned hydro-electric generation units.

We offer the clients a vast array of generation industry experience on control systems manufactured for over a 100 years. We have a proven track record of project management, project engineering, training, testing, repair, maintenance, phone and field troubleshooting.

The control system, including the governor, affects many aspects of generation and a vast array of knowledge has been gained through working with the entire system.

Our goal is to increase unit reliability and stability through proper maintenance, tuning and testing of existing controls during planned outages.

All of our services are interactive. Organizations will benefit with an increased understanding of how the controls work, from an overview for management and engineering to hands-on for people in the plant.

SERVICES AVAILABLE

➤ TRAINING

Customized classes can be geared for any trade including management and engineering and will provide a substantial knowledge of both **how** the control works and the process of maintaining it.

➤ SUPPORT

Support services include phone assistance with troubleshooting control systems or on-site services if needed. Support also includes on-site overhaul and maintenance of multiple vintages of control systems.

➤ UNIT TESTING

Testing, repair and tuning is available to ensure a unit's ability to meet applicable industry standards.

➤ PROJECT MANAGEMENT

Project management can be provided for organizations that require specialized expertise in control systems.
